## Introduction

The Lexus Charging Network rates are governed by the maximum charging speed, for which a fast charging speed usually also implies higher costs.

Lexus Charging Network differentiates the following charging speeds:

- AC – alternating current (normal charging)
- DC – direct current (fast charging)
- HPC – high power charging (ultra-fast charging)

The maximum charging power capacity of each charging station can be found on the Lexus Charging Network website and the Lexus Link+ app.

Please note that the transaction units for charging in public areas may vary due to regulatory requirements in the individual European countries. A transaction is differentiated in terms of kWh, time (min.), or by charging event. All prices are individually based on charge point operators. A variable tariff applies with regard to the individual charging process. The prices depend on respective charge point operators. For charging abroad (= e-roaming), you will always pay the local sales rate without any additional fees.

## Lexus Charging Network

The rates that apply to an individual charging event at the respective charging station can be found in the Lexus Link+ App and are subject to change. Please familiarise yourself with the applicable rates before commencing the charging event.
